I am suffering from the spondylodysplastic Ehlers- Danlos Syndrome (spEDS)

A heritable connective tissue disorder.

Spondylodysplastic Ehlers-Danlos Syndrome (spEDS)

A heritable connective
tissue disorder.

Main symptoms:

- Hypermobility of distal joints
- Thin finely wrinkled skin
- Muscle hypotonia
- Short stature (progressive in childhood)

Caution:

- Please treat and move me with extra care. I have an increased risk of (sub)luxations.
- Local anesthesia may be less effective or ineffective.
- Be aware of jaw dislocations and a fragile cervical spine when intubating.
- Wound healing is delayed, be cautious of invasive procedures.
