

SOS

I am suffering from the myopathic Ehlers-Danlos Syndrome (MEDS)

A heritable connective tissue disorder.

Main symptoms:

- Hypermobility of distal joints
- Muscle hypotonia/muscle atrophy
- Proximal joint contractures

Caution:

- Please treat and move me with extra care. I have an increased risk of (sub)luxations and bleeding.
- Local anesthesia may be less effective or ineffective.
- Be aware of jaw dislocations and a fragile cervical spine when intubating.
- Wound healing is delayed, be cautious of invasive procedures.
